

MICHAEL ALEX

Senior Full-Stack Engineer

React, Next.js, TypeScript • LLM-powered apps

michaelalex.dev@gmail.com • [GitHub](#) • [LinkedIn](#)

Based in Europe • Open to Remote

SUMMARY

Senior full-stack engineer with 10+ years building and shipping production web apps end to end, from React and TypeScript front ends to Next.js and NestJS back ends. Now building AI-powered product features: LLM-backed experiences, and tool-using agents, along with the back-end pipelines and streaming APIs behind them. Eager to take on the hard, unclear problems, ambiguous work: framework migrations, shared components the whole product relies on, and cross-team features, while leading and mentoring engineers along the way.

EXPERIENCE

REMOTE SENIOR SOFTWARE ENGINEER @ [SchoolLinks](#)

November 2021 - Present

Stack: React, Next.js, Python (Django)

SchoolLinks is a Series B college and career readiness SaaS platform used by 1,000+ school districts and 6M+ students across the US.

- Designed and built foundational common components reused across nearly every product module:
 - RichTextEditor - text editor with image upload, built on top of [draft.js](#).
 - Uploader - drag-and-drop file uploader.
 - DataTable - table with virtualized horizontal scroll.
 - VerticalFilterV2 - filter component used in almost all modules.
 - BulkActionDrawer - bulk action drawer used across modules.
- Drove the JavaScript-to-TypeScript migration across the codebase.
- Led the React 16 to React 18 upgrade across the codebase to modernize the frontend.
- Built the team's [Storybook](#) common components library together with documentation, style guides, and conventions around it.
- Wrote unit tests in Jest and end-to-end tests using [Playwright](#), authored internal style guides for Storybook, Jest mocking and parameterization, and [react-query](#) usage.
- Wrote technical proposals and module planning documents in [Notion](#) before shipping major features.
- Improved the front-end engineering interview rubric and ran technical interviews and live coding sessions, helped the team bring several strong engineers onboard.
- Brought AI deep into daily engineering: use Claude Code and LLMs to brainstorm complex problems, break down ambiguous tasks, accelerate refactors and migrations, and pressure-test technical designs. Authored team guidance on effective AI-assisted engineering workflows.

REMOTE SENIOR REACT DEVELOPER @ [OpenNode LLC](#)

December 2019 - November 2021

Stack: React, Python (Django)

OpenNode is an Estonia-based company that builds open-source infrastructure management software and implements cloud systems.

My [contributions](#) to [Waldur HomePort](#), the open-source web client for [Waldur MasterMind](#) (a platform for managing private clouds, public clouds, and HPC centres):

- Migrated legacy AngularJS code to React/Redux with TypeScript.
- Designed and implemented a new UI design system, introduced reusable components used across the application.
- Integrated [React-Bootstrap](#) components library and refactored the [FullCalendar](#) module for managing bookings.
- Contributed to production-critical tasks, including global state management migration.
- Built a backend health status monitoring system for multiple microservices that integrated Waldur.
- Covered components and code fragments with unit tests using Jest and Cypress.

[FREELANCE FULL-STACK WEB DEVELOPER @ Upwork](#)

July 2018 - December 2019

Stack: React, Angular, Next.js, NestJS, MongoDB, PostgreSQL

Part-time freelance work building React, Angular, and full-stack web applications for international clients across multiple industries.

- Built 2 React/Redux web applications providing different types of data analytics visualizations using [ECharts](#), shipped to production and used by many client customers.
- Engineered RESTful APIs in Node.js / Express.js backed by MongoDB and PostgreSQL data layers.
- Owned full-stack architecture on solo and small-team engagements end to end, from data model and API design to component patterns and deployment, building with Next.js.
- Built and maintained Angular (2+) applications using Angular Material, RxJS-based reactive state, and form-heavy admin dashboards.
- Implemented authentication and authorization flows (JWT, OAuth, role-based access control), used Next.js for server-side rendering and SEO on customer-facing sites.
- Collaborated across distributed teams in Agile / Scrum workflows, reviewed pull requests and validated cross-browser compatibility.

Stack: Angular, NestJS, Express.js, MongoDB

- Built and led multiple Tbilisi City Hall and Government of Georgia digital projects, delivering citizen-facing web applications that serve the public across municipalities of Georgia. These projects were built with Angular on the front-end and Express.js on the back-end, my main stack here.
- Started as an intern and was promoted multiple times, progressing through junior, middle, and senior developer levels over 4+ years.
 - Onboarded new hires, mentored and tutored interns and junior developers, led teams on multiple production projects.
 - Led the front-end team on [Tbilisi Taxi](#) (taxi reform) and [Build](#) (infrastructure projects across municipalities of Georgia).
 - Worked on [Tbilisi Zone Parking](#) and [Business Parking](#) reforms launched in 2017-2018.
 - Built [EV Charging](#) (today serving 300+ free EV chargers across Tbilisi), [Idea](#) (citizen ideas platform), [My Tbilisi](#) (citizen portal with Smart Map, Fix Tbilisi, and online services), and [Municipal Services](#) electronic platform.

SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL
- **Frontend:** React, Redux, React Query, Next.js, Angular, RxJS, Angular Material, Material-UI, HTML, CSS, Sass
- **Backend & Data:** Node.js, Express.js, Next.js, Django, REST APIs, MongoDB, PostgreSQL
- **AI Engineering:** LLM app development (Claude & OpenAI APIs), Vercel AI SDK, RAG, embeddings & vector search, prompt engineering, function / tool calling & agents, evals, MCP (Model Context Protocol), streaming responses
- **AI-Assisted Dev:** Claude Code, Cursor, GitHub Copilot
- **Testing & Tools:** Jest, Playwright, Cypress, Storybook, Git, Docker, CI/CD, Notion

EDUCATION

GEORGIAN TECHNICAL UNIVERSITY	2022 - 2025
Ph.D. in Informatics	
GEORGIAN TECHNICAL UNIVERSITY	2019 - 2021
Master of Information Technology	
TBILISI STATE UNIVERSITY	2015 - 2019
Bachelor of Science in Computer Science
